## **WIRING SCHEMATICS**

# **ON-ROAD VEHICLE CONVERSION SINGLE AND DUAL MOTOR APPLICATION**

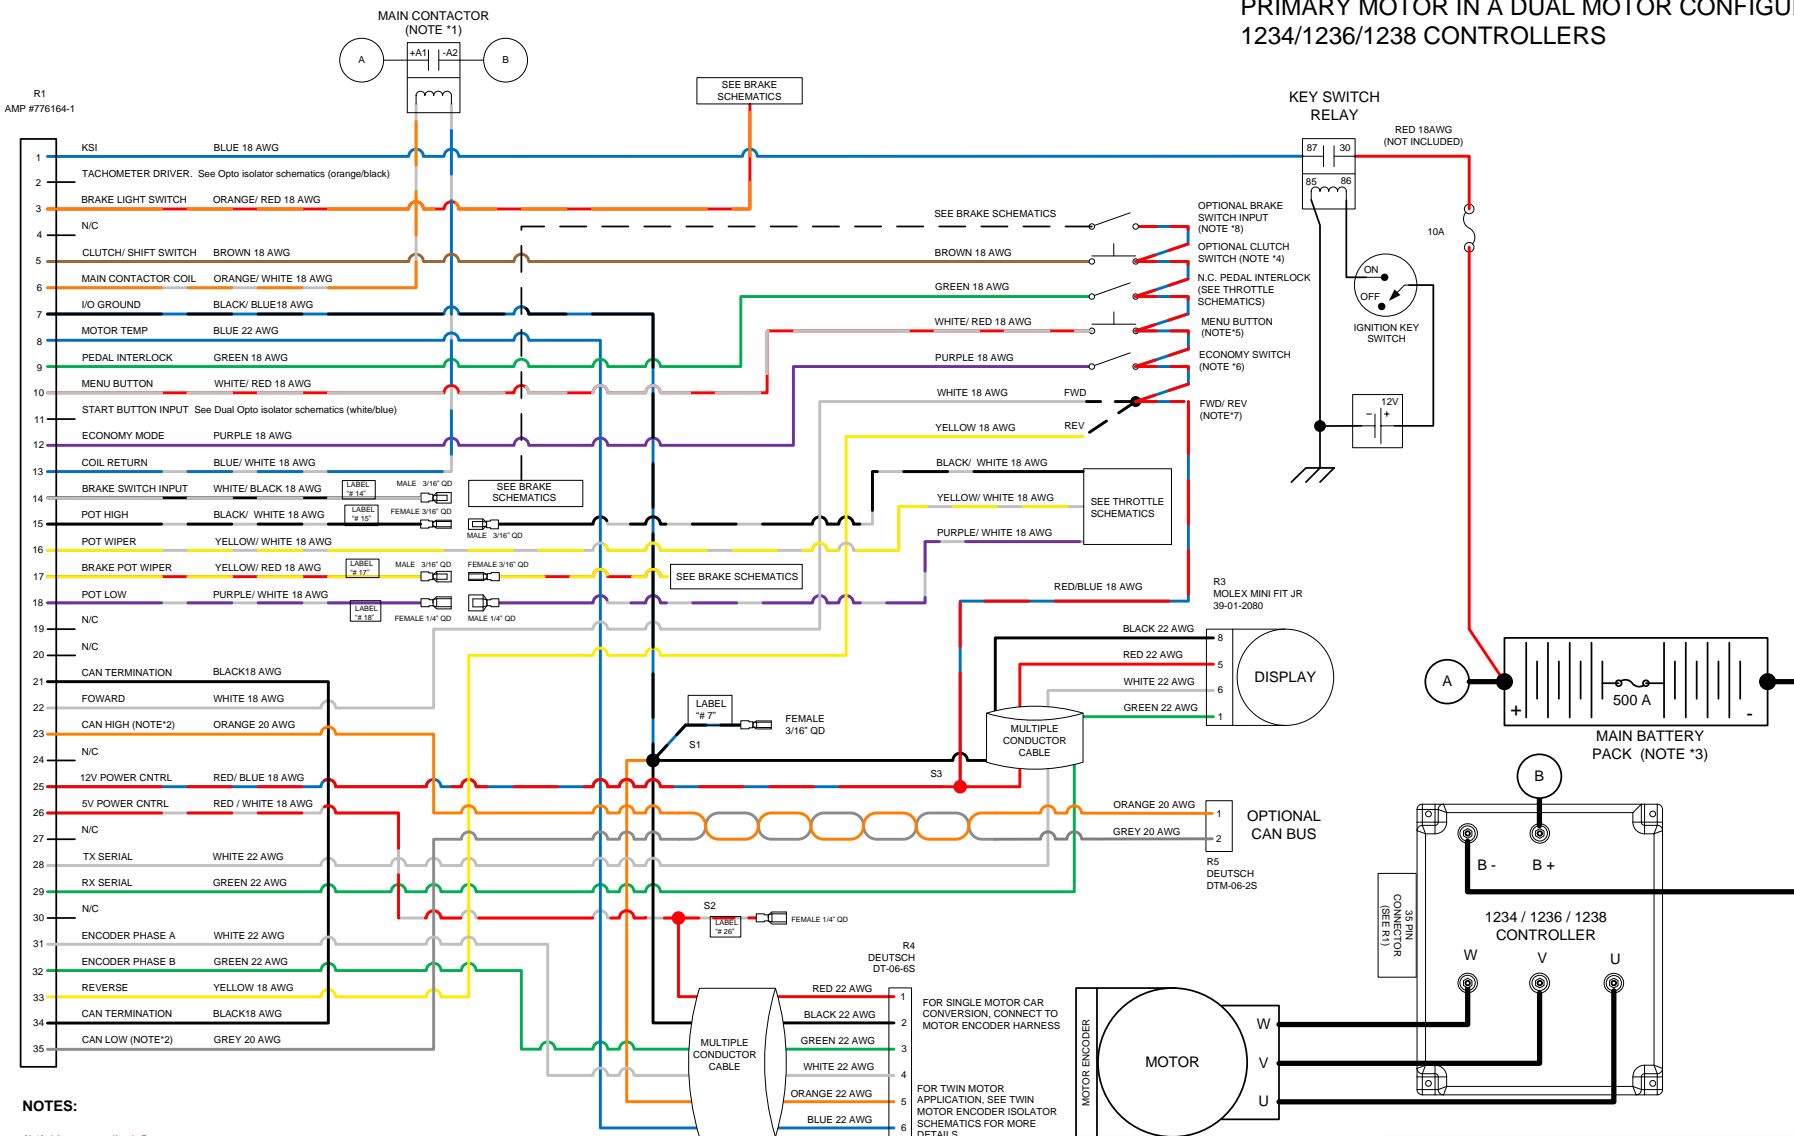

**FOR SOFTWARE VERSIONS 5.13 AND HIGHER**

**FOR CURTIS CONTROLLERS 1234/1236/1238**

**REVISION: C**  
**Date: 4/11/14**

**NOTICE:** This drawing is the property of Hi Performance Electric Vehicle Systems Inc., and/or its subsidiaries and affiliates (individually and collectively "HPEVS"), and contains highly proprietary, confidential, and trade secret information of HPEVS. The recipient of this drawing agrees (a) to use the information contained herein for the purpose for which it was furnished by HPEVS (b) to return this drawing upon HPEVS request. This notice shall appear on any complete or partial reproduction of this drawing.

## ELECTRICAL SCHEMATIC FOR SINGLE MOTOR OR PRIMARY MOTOR IN A DUAL MOTOR CONFIGURATION 1234/1236/1238 CONTROLLERS

### NOTES:

(\*1) Use supplied Contactor.

(\*2) The Controller CAN Communication needs to be isolated from other CAN based components. A CAN isolator may be needed. Possible source of CAN isolator is CANOP from B&B Electronics ([www.bb-elec.com](http://www.bb-elec.com))

(\*3) A Battery Management System (BMS) is strongly recommended if Lithium Ion batteries are used. A possible source of BMS is Ewert Energy System's ORION BMS ([www.orionbms.com](http://www.orionbms.com))

(\*4) Install the Optional Clutch/ Shift Switch so that is ON when the clutch pedals are pressed. When the clutch pedal is pressed, the Regen setting is changed to Shift Neutral Braking Parameter to prevent the motor from stalling during gear shifting. In a clutchless system, this allows the user to set the coast down rate of the motor so that the gears align properly See Instructions on SHIFT-NEUTRAL BRAKING PARAMETERS.

(\*5) Gives access to Drive System information. Required to access Programming and Diagnostic modes. See Programming Instructions.

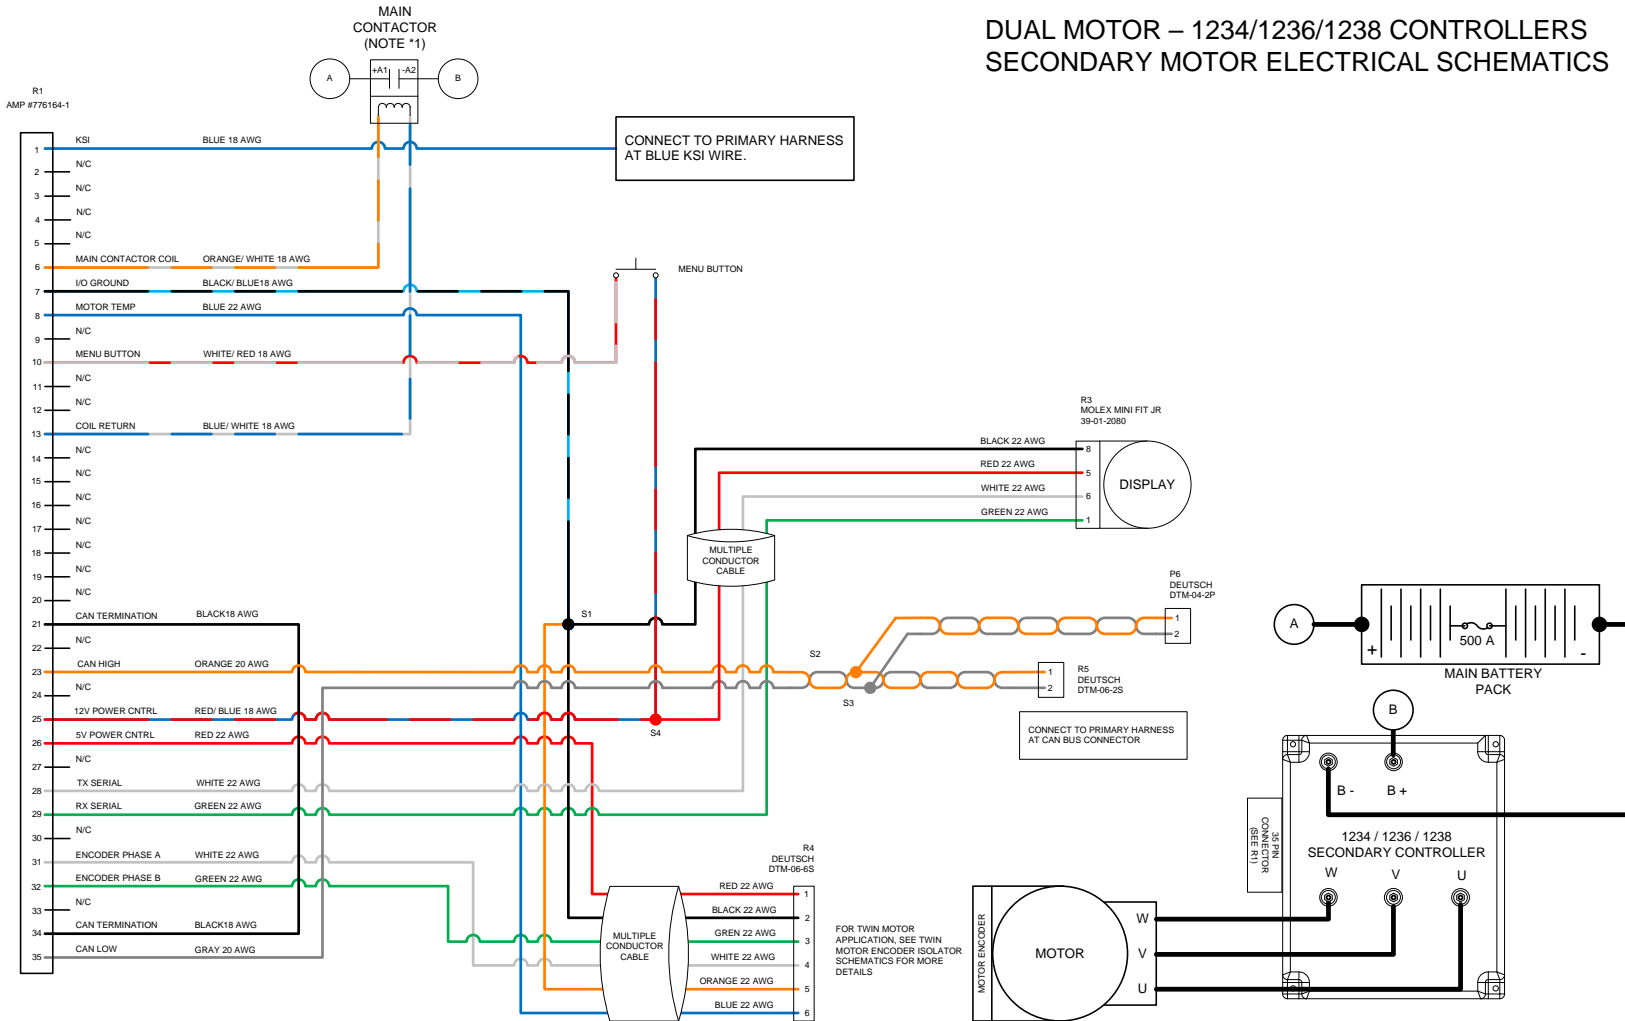

(\*6) Allows the use of ECONO Mode Parameters. See Programming Instructions.

(\*7) Forward is CLOCKWISE motor rotation from Encoder end view. Depending on the transmission configuration, use either wire to obtain desired rotation. Use a FWD & REV Switch in direct drive applications.

## THROTTLE CONFIGURATION

Depending on the type of throttle used for the application, the different types of throttle configurations are listed within the table below. Electrical schematics are also included within the following pages.

THROTTLE CONFIGURATION	TYPE
ELECTRONIC without SWITCH	TYPE 1
2 WIRE with SWITCH 0-5k $\Omega$	TYPE 2
3 WIRE with SWITCH 0-5k $\Omega$	TYPE 3
CURTIS PB8 THROTTLE ASSEMBLY	TYPE 3

## PEDAL INTERLOCK CONNECTION

The pedal interlock connection is required for both 2 and 3 wire throttle pot assemblies. The Green wire is connected to the Normally Closed tab. The red/blue wire is connected to the common tab. See picture below.

NOTE: when the accelerator pedal IS PRESSED the interlock switch is released to its NORMAL position (switch not activated) thus completing the circuit since its green wire is connected to the normally closed (NC) connection.

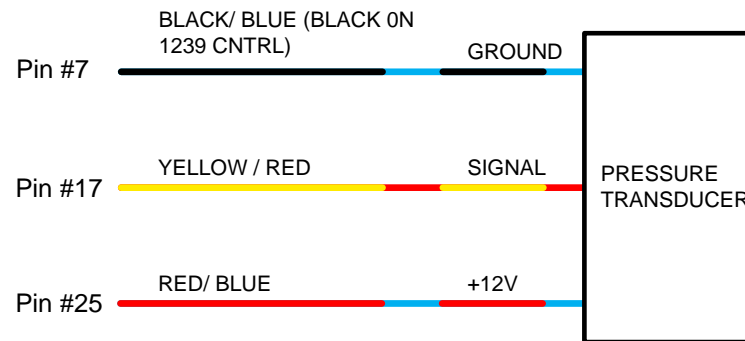

## BRAKE INPUT CONFIGURATION

Depending on the type of brake input used for the application, the different types of brake input configurations are listed within the table below. Electrical schematics are also included in the following pages.

<b>BRAKE INPUT CONFIGURATION</b>	<b>TYPE</b>
NO BRAKE POT INSTALLED	TYPE 0
PRESSURE TRANSDUCER/ ELECTRONIC 0-5V INPUT	TYPE 1
2 WIRE 0-5k $\Omega$ POT	TYPE 2
SWITCH	TYPE 3
