## **WIRING SCHEMATICS**

**FOR SOFTWARE VERSIONS 5.13 AND HIGHER**

**FOR CURTIS 1239 CONTROLLER  
ON-ROAD VEHICLE CONVERSION  
FOR SINGLE AND WITH DUAL MOTOR  
APPLICATIONS**

**REVISION: B  
Date 12/09/13**

**NOTICE:** This drawing is the property of H Performance Electric Vehicle Systems, Inc., and/or its subsidiaries and affiliates (individually and collectively "HPEVS"), and contains highly proprietary, confidential, and trade secret information of HPEVS. The recipient of this drawing agrees (a) to use the information contained herein for the purpose for which it was furnished by HPEVS, (b) to return this drawing upon HPEVS request. This notice shall appear on any complete or partial reproduction of this drawing.

## NOTES:

(\*1) Use supplied Contactor.

(\*2) Use supplied Pre-Charge Resistor and Relay (Tyco Electronics Part # T9AP1D52-12). For Coil connection, connect to small terminals.

(\*3) Tachometers that are designed to work off of an ignition coil may not function in this application. Some Tachometers may need a pull up resistor of 4.7K  $\Omega$

(\*4) A Battery Management System (BMS) is strongly recommended if Lithium Ion batteries are used. Possible source of a BMS is Ewert Energy System's ORION BMS ([www.orionbms.com](http://www.orionbms.com))

(\*5) Start switch option is required if Idle or Creep Torque are ENABLED. See Programming Instructions. A start switch CAN be used without using IDLE. See programming instructions for information.

(\*6) Install the Optional Clutch/ Shift Switch so that is ON when the clutch pedal is pressed. When the clutch pedal is pressed, the Regen setting is changed to Shift Neutral Braking Parameter to prevent the motor from stalling during gear shifting. In a clutchless system, this allows you to set the coast down rate of the motor so that the gears align properly See Instructions on SHIFT-NEUTRAL BRAKING PARAMETERS.

(\*7) Gives access to Drive System information. Required to access Programming and Diagnostic modes. See Programming Instructions.

(\*8) Allows the use of ECONO Mode Parameters. See Programming Instructions.

(\*9) Forward is CLOCKWISE motor rotation from Encoder end view. Depending on Transmission configuration, use either wire to obtain desired rotation. Use a FWD & REV Switch in direct drive applications.

## THROTTLE CONFIGURATION

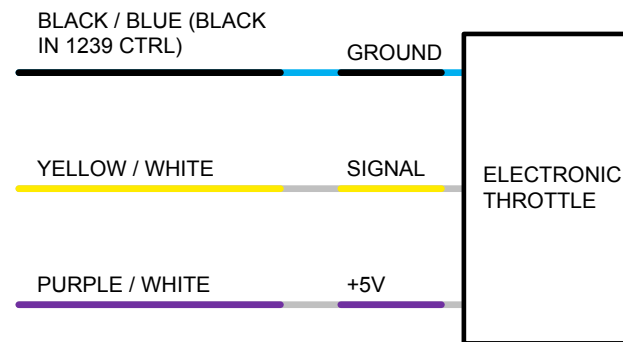

Depending on the type of throttle used for the application, the different types of throttle configurations are listed in the table below. Electrical schematics are also included within the following pages.

THROTTLE CONFIGURATION	TYPE
ELECTRONIC without SWITCH	TYPE 1
2 WIRE with SWITCH 0-5k $\Omega$	TYPE 2
3 WIRE with SWITCH 0-5k $\Omega$	TYPE 3
CURTIS PB8 THROTTLE ASSEMBLY	TYPE 3

**NOTICE:** This drawing is the property of Hi Performance Electric Vehicle Systems Inc., and/or its subsidiaries and affiliates (individually and collectively "HPEVS"), and contains highly proprietary, confidential, and trade secret information of HPEVS. The recipient of this drawing agrees (a) to use the information contained herein for the purpose for which it was furnished by HPEVS (b) to return this drawing upon HPEVS request. This notice shall appear on any complete or partial reproduction of this drawing.

## PEDAL INTERLOCK CONNECTION

The pedal interlock connection is required for both 2 and 3 wire throttle pot assemblies. The Green wire is connected to the Normally Closed tab. The red/blue wire is connected to the common tab. See picture below.

NOTE: when the accelerator pedal IS PRESSED the interlock switch is released to its NORMAL position (switch not activated) thus completing the circuit since its green wire is connected to the normally closed (NC) connection.

## BRAKE INPUT CONFIGURATION

Depending on the type of brake input used for the application, the different types of brake input configurations are listed in the table below. Electrical schematics are also included within the following pages.

<b>BRAKE INPUT CONFIGURATION</b>	<b>TYPE</b>
NO BRAKE INPUT USED	TYPE 0
PRESSURE TRANSDUCER/ ELECTRONIC 0-5V INPUT	TYPE 1
2 WIRE 0-5k $\Omega$ POT	TYPE 2
SWITCH	TYPE 3

## OPTIONAL ACTIVE BRAKE LIGHT CONFIGURATIONS

These optional active brake light configurations are used to activate the brake lights during regenerative braking or when the vehicle brakes are being applied. Based on the brake type configuration that is being used in the application use one of the following wiring configurations.

**NOTICE:** This drawing is the property of Hi Performance Electric Vehicle Systems Inc., and/or its subsidiaries and affiliates (individually and collectively "HPEVS"), and contains highly proprietary, confidential, and trade secret information of HPEVS.
